

Can you hear well?

Do any of these sound familiar?

- ✓ I often ask others to repeat themselves during conversations.
- ✓ Sometimes I don't notice when someone calls me from behind.
- ✓ I often mishear what people say.
- ✓ I don't always notice something approaching from outside my line of sight.
- ✓ I've been told I speak too loudly.
- ✓ I struggle to hear when there are multiple people talking (e.g., meetings or conferences).
- ✓ I find it hard to hear household sounds like the microwave beep or doorbell.
- ✓ I sometimes guess or assume what others are saying.
- ✓ I spend time in noisy workplaces or loud environments.
- ✓ My family often says the TV or radio is too loud.

From a letter from the Japan Hearing Aid Manufacturers Association

If either of these conditions applies to you, please exercise caution.

The effects of hearing loss

hearing loss	No auditory stimuli such as sounds or voices
Impact ①	Communication becomes difficult. Detecting danger and understanding the surroundings becomes challenging.Reduced ability to communicate
Impact ②	Decline in cognitive function

As stated here, hearing loss is no longer simply a "hearing problem" but is increasingly being recognized as a significant factor that increases the risk of developing dementia.

The relationship between hearing loss and dementia risk

Hearing loss* **doubles** the risk of developing

Safe for beginners
The first step to hearing

Anbe Clinic Director
Dr. Kouichi Anbe

"CHO-ROKU" is easy to operate and designed with safety in mind, so even first-time users can try it out with confidence. For those who have recently begun to experience hearing loss, "CHO-ROKU" is recommended as the first step in regaining your hearing. Early treatment is of the utmost importance when it comes to hearing loss. If you experience even the slightest discomfort in your ears, consult a specialist doctor as soon as possible.
